AppleShare Copy Volume Limitation (6/93)

Article Created: 23 June 1993

TOPIC -----

The Copy Volume feature of AppleShare 3.0 Admin doesn't seem to work when the target volume is a server (the copy button turns gray). It works fine when the target is a local hard drive. Is this the way it should work?

DISCUSSION -----

The "Copy <item> to..." menu item in the Privileges menu won't copy files to non-local volumes. Unfortunately, this isn't made clear in the "AppleShare 3.0 Administrator's Guide."

The purpose of the "Copy <item> to..." menu item is to copy files to another volume while maintaining the access privileges. It isn't possible for the "Copy <item> to..." menu item to do this when copying files to an AFP server. The files copied would be given new privileges.
