Apple IIc: After Upgrade Can't <Open Apple><Ctrl><Reset>

Article Created: 22 April 1986
Article Last Reviewed: 17 July 1992
Article Last Updated:

PROBLEM DESCRIPTION: After an Apple IIc logic PCB has been
upgraded, it seems to be unable to perform an Open
Apple/Control-Reset.

CAUSE: The board is still able to perform the reset. However the
timing in the key strokes is more critical.

CURE: 1. While simultaneously holding the Open Apple and Control
         keys down, press and release the Reset key.
      2. Release the Open Apple and Control keys "after" you have
         released the Reset key.

If the above cure doesn't fix the problem, search on GTS and the
product's name to obtain a general troubleshooting procedure.
