Macintosh Interrupt

Article Created: 20 May 1986
Article Last Reviewed: 17 July 1992
Article Last Updated:

PROBLEM DESCRIPTION: Customer has purchased the Macintosh
800K Enhancement or Macintosh Plus Upgrade and notices that
when pressing "Interurrupt" on the Programers Switch a ">" appears
in a dialog box. The prompt and dialog box did not appear on the
customers Macintosh 512K before the upgrade occured.

CAUSE: This is not a software or hardware failure, but an added
enhancement made to ROM for programing purposes. Pressing the
interrupt switch after booting to the "desktop" or executing a
program will cause the Macintosh to drop into the Mini-Debugger.

CURE: To exit the Mini-Debugger type "G" and press "RETURN". This
will allow the user to resume work without having to reboot the
computer.
