LaserWriter: Using Refilled Toner Cartridges

This article last reviewed: 06 September 1990

Apple does not recommend the use of refilled toner cartridges because print quality may suffer as parts inside the toner cartridge wear out. Using refilled toner cartridges in your LaserWriter, LaserWriter Plus, LaserWriter II, or Personal LaserWriter printers may or may not cause damage. The impact on Apple printers is difficult to assess because it is impossible to predict the quality of refurbished cartridges.

The use of a refilled toner cartridge in your printer will not void a LaserWriter printer's limited warranty or an AppleCare contract. However, if printer failure is attributable to the use of a refilled toner cartridge, the damage resulting from this failure will not be covered under Apple's limited warranty or AppleCare contract.

The following is a reminder of which cartridges to use with your printer:

- The LaserWriter and LaserWriter Plus both use EP cartridges.
- The LaserWriter II uses EPS cartridges.
- The Personal LaserWriter uses EP-L cartridges.
