LaserWriter: Shrinking Image Problem

This article last reviewed: 19 February 1991

TOPIC -----

I have a LaserWriter Plus that shrinks any image that I print. After I replaced the scanner, the problem went away for a while. Now the shrinking problem is back again. I'm curious as to whether the problem was caused by just the scanner or something else.

DISCUSSION -----

It may be that either the motor, the DC Power Supply/motor driver PCB, or the DC Controller is causing this problem. On more than one occasion the power supply has been the culprit.
