TOPIC -----

I want to ship a LaserWriter IINTX (purchased in the USA) to Israel. Are there any kits that convert the LaserWriter to 220VAC?

DISCUSSION -----

There isn't a kit for the LaserWriter II to convert it to accept 220VAC. Further, the individual parts that need to be replaced (DC Power Supply, AC Power Supply, and Fuser Assembly) are not available for purchase in the United States.

You have two options available: Either buy and use a stepdown transformer (rated at 1300 Watts) or buy the parts overseas. The transformer is better, because then you can use the printer anywhere you take the transformer.
