Personal LaserWriter: Using Overseas

This article last reviewed: 15 July 1990

TOPIC -----

Is a step-down transformer required for using a Personal LaserWriter overseas? It appears that it does because on the back of the printer it states 100-115v at 50-60 Hertz. Also, why does the printer specification sheet give both US/Japan and European/Australian power requirements?

DISCUSSION -----

As with our other LaserWriter printers, there are voltage-specific versions available. There are actually two different Personal LaserWriters versions: one for the US/Japan market and the other for the European/Australian market.

You do need a step-down transformer if you take a Personal LaserWriter overseas, just as you would for any LaserWriter or LaserWriter II.
