Lisa: Screen Dumps

To print the current contents of the screen, hold down the SHIFT and OPTION keys while pressing the 4 on the keypad. Screen dumps of the Office System 1.0 software only print to the DMP, which must be connected to the upper port of the parallel card in slot 2. Versions newer than Release 1.0 support either the DMP or Imagewriter connected to any port, as long as they're selected in Preferences.

Virtually anything displayable on the screen may be printed--including, for instance, disk directories.
