Lisa 7/7 Software: Unable to Use a Tool That Has a Password

Even though your Lisa Office System manual states (page 257) that you
can protect your tools (applications) with passwords -- don't do it! If
you protect a tool that hasn't been used since you powered up, when you
attempt to use it, you will get a message that the tool is damaged or is
having technical difficulties. You must remove the password before
proceeding. LisaWrite and LisaList are exceptions: they seem to function
regardless of whether you entered a password.
