## **LisaCalc: Calculation Order**

LisaCalc 7/7 doesn't have a specific calculation order -- it simply determines the approach that will make for the fewest possible passes. Therefore, you don't need to worry about placement of formulas in relation to the cells they involve.

LisaCalc 1.0 and 2.0, on the other hand, calculate first by rows, then by columns. They then check to see if both answers are the same. If they aren't the same, LisaCalc calculates by rows again then rechecks the answers. If Calculate Automatically is selected, this process is repeated until two successive calculations yield the same answers, or until 30 seconds has passed. If Calculate Manually is selected, the process is repeated indefinitely.
