## Workshop 2.0 and Earlier: How To Get a Screen Dump

The only way to get a screen dump from anywhere in the Workshop is through the debugger commands PR and PS. This set of commands only supports a parallel dot matrix printer. Keep in mind also that the editor will allow printing of a document in the window.

Version 3.0 and later support both serial and parallel printers:

```
PRnm
n=which port
m=UL
<None>
```

Keywords: <None>
