Lisa Pascal: Units

It's not possible to create an intrinsic unit. Even though the manual gives you a minimum of information, you can compile a regular unit. You don't have to put it in a library to use it, as with the Apple II and Apple III. To compile a regular unit, just include the following compiler command at the beginning of your unit:

```
{ $U- }  
Unit Sample;  
  Interface  
  . . .  
  Implementation  
  . . .  
end.
```

Include the object code file in your program's USES statement.
