AV Series: RS383 Video Support? (1/94)

Article Created: 19 January 1994

TOPIC --

I want to set up a Quadra 660AV running VideoMonitor to use in place of
regular aircraft monitors, which are very expensive.

I know the AV Series Macintoshes support NTSC, PAL, SECAM. Can they run
RS383 video instead? RS383 is a composite video, 640x480. They want to
use C++ to create buttons that simulate those buttons around the aircraft
monitor. Can DSP (Digital Signal Processor) handle it?

DISCUSSION ---

We are not familiar with the RS-383 video format. However, there is an
chance the format will work if its horizontal and vertical frequencies
correspond to those employed by one of our Macintosh computers. If this
is the case, a cable must be made with the appropriate sense line
configuration.
