AudioVision 14 Display: Built-In Microphone Audio Level (4/95)

```
Article Created: 03 March 1995
Article Reviewed/Updated: 3 April 1995

TOPIC -----------------------------------------------------------

How come when I record a sound using the microphone built into the AudioVision
14 Display connected to my Quadra 630, the sound is low and full of static?

The ~AudioVision extension loads normally and all the AV options appear in the
Sound control panel.

DISCUSSION ------------------------------------------------------

We recommended that customers use a PlainTalk microphone connected directly to
the Macintosh 630 family computer instead of the built-in microphone on the
AudioVision 14 Display.  As an alternative, disabling the ~AudioVision control
panel may improve the recording quality of the AudioVision 14 microphone.

The following computers are in the Macintosh 630 family: LC 630, Quadra 630,
Performa 630, Performa 635, Performa 636, Performa 637, and Performa 638.
