Apple IIe Card: Using with Apple High Resolution 13-inch Monitor

Article Created: 13 August 1991
Article Last Reviewed: 3 June 1992
Article Last Updated: 3 June 1992

TOPIC -----

Are there any display problems associated with connecting the Apple 13-inch High Resolution Monitor to a Macintosh LC with an Apple IIe Card? Will some objects display with incorrect aspect ratios?

DISCUSSION -----

There shouldn't be any problem using the Apple High Resolution 13-inch Monitor with the Apple IIe Card. Using a 13-inch RGB monitor on the Macintosh LC with Apple IIe emulation should not affect the aspect ratio of any object. Circles should still be circles. However, when running Apple IIe emulation, you can only use certain Apple IIe text display modes:

- 80 columns, 24 lines, 5x7 dot matrix
- 40 columns, 24 lines, 5x7 dot matrix
- All text appears on the screen as normal, inverse, or MouseText characters
