TOPIC -----

What Apple monitors work with the Apple IIe Card?

Can I use an LCD projection pads with the IIe card?

DISCUSSION -----

Monitors

The Apple IIe Card supports the following monitors:

- Macintosh 12-inch RGB Display
- Macintosh 12-inch Monochrome Display
- AppleColor 13-inch High Resolution Monitor
- Apple 13-inch Monochrome Monitor
- IBM VGA monitors (those that work with the Macintosh LC, with the correct cable)

In other words, Apple IIe Card supports all monitors that are supported by the Macintosh LC video, including the 13-inch color monitor.

Projection Pads

As for LCD Projection Pads, we have only tried the nView ViewFrame II+2. It works with both the 13-inch and the 12-inch monitor. 13-inch projection pads should work, if you have a 13-inch monitor hooked up in-line with the projection pad cable.

Most pads provide a DB-15 female connector to plug into your monitor. The video that the Macintosh LC sends out is based on the monitor sense pins. If the projection pad can support many different video types, it should work also with a 12-inch monitor connected.

If you have a pad, test it with both the 12-inch and 13-inch monitors. If it works with both monitors, it should work with the Apple IIe card. If the pad has problems with the 12-inch monitor, then it also will have problems with the

IIf card.
