TOPIC ---

This article describes the Apple Workgroup Server 60.

DISCUSSION --

The Apple Workgroup Server 60 provides the performance, reliability, and
manageability you need to meet small and medium workgroup requirements for
file and print server applications. The most affordable of Apple's server
family, this system is based on the 20-megahertz Motorola 68040
microprocessor. With on-board Ethernet and built-in AppleTalk networking
capability, this product is ideal for the needs of up to 20 users (that is,
users simultaneously reading from and writing to the server).

The Apple Workgroup Server 60 gives you flexibility and choice. You can
choose a 230MB or 500MB internal hard disk, add an internal CD-ROM drive,
and install a NuBus or processor-direct slot card. A high-speed SCSI
interface lets you add peripherals, such as hard disks and other
high-capacity storage devices.

The Apple Workgroup Server 60 continues the "plug and play" tradition
established by the Macintosh. System 7 and high-performance AppleShare 4.0
file and print server software is preloaded, so all you do is attach your
monitor, keyboard, power cables, and network connection -- and in minutes the
server is available to users. Because it's a snap to maintain, manage, and
reconfigure, over the long run the Apple Workgroup Server 60 offers the
lowest cost of ownership in its class.

To provide an entry-level file and print server solution for your small
business, classroom, or similar environment, build your solutions around
the Apple Workgroup Server 60.
