AWS 95: Maximum Number of Macintosh Volumes (5/93)

Article Created: 28 May 1993

TOPIC ---

What is the maximum number of Macintosh volumes that can be attached to an
Apple Workgroup Server (AWS) 95?

DISCUSSION --

The Macintosh OS sees all four SCSI buses as one; this makes it unable to
distinguish SCSI devices with the same id, but on different SCSI buses.
Each HFS volume must have a unique SCSI id between 0 and 6, for a maximum
of 7 HFS volumes.
