## Workgroup Server 9150/120: Drive Setup Compatibility (3/97)

Article Created: 7 March 1997

TOPIC -----

I have a Workgroup Server 9150/120. The version of Drive Setup (1.2.2) that comes with System 7.6 gives an error message "Cannot be used with this Macintosh" when trying to launch the Drive Setup.

I used version 1.0.5 of Drive Setup and everything worked fine. What's happening?

DISCUSSION -----

Apple Engineering has been notified of this situation. They will work toward a solution, possibly in a future release of Drive Setup. In the meantime, version 1.0.5 of Drive Setup is the accepted alternative.
