TOPIC -----

What is the Apple Desktop Bus (ADB) port on the LaserWriter IISC used for?

DISCUSSION -----

The Apple Desktop Bus can be used to control external devices such as cut sheet feeders, bin feeders, and output collators for the LaserWriter IISC. The ADB port isn't currently supported in the LaserWriter IINT and LaserWriter IINTX ROMs.

Developers may contact Apple Software Licensing for additional information on developing ADB devices for the LaserWriter IIs. Search on "Software Licensing" for address information.
