TOPIC -----

How do I sample stereo sound with my Macintosh II?

DISCUSSION -----

The Farallon MacRecorder sound sampler allows you to sample stereo sounds on the Macintosh II.

Use the MacRecorder to record the left channel, then separately record the right channel. To record both channels simultaneously, connect two MacRecorders.

MacRecorder comes with a program called SoundEdit that allows for sound mixing, special effects (echo, flanger, noise, etc.), editing sampled sounds, and more.

Note: the Macintosh II internal speaker plays only the left channel -- to hear stereo sound, you must add external speakers.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
