Article Last Updated:

TOPIC -----

I need to use a Macintosh II in a very harsh environment, ie. factory.  
How can I protect my Macintosh?

DISCUSSION -----

If you need an industrial-grade Macintosh II, look into Automatix's modified Macintosh II. The AI-90 computer integrates Macintosh II innards with a steel case (rated NEMA 2), a shock-mounted hard disk, and temperature- and power-monitoring circuits.

A second computer, the AV-90, extends the AI-90 for video digitization. It includes a frame-grabber card and an interpreted language for imaging and I/O work -- MacRail.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
