Macintosh II: System Error 25 When Using Three Or More Monitors

Article Created: 20 September 1988
Article Last Reviewed: 30 June 1992

TOPIC -----

If you are using three monitors with your Macintosh II (for instance, a LaserView, an Apple RGB, and a SuperMac monitor), you may receive a System Error 25.

DISCUSSION -----

This is an out-of-memory error. When using three or more monitors, you need to ensure that the applications have enough memory to support three screens worth of data and word processing cut, copy, and paste functions.

If you use MultiFinder or System 7, you need to increase the amount of memory for each application. If you run on a 1MB system, you need to remove anything that uses extra memory. You should also switch to the lowest bits/pixel possible (two).

(NOTE: The LaserView in particular uses a lot of system memory when it is running in "high" mode. This, coupled with using two additional monitors, may be the root of the problem.)
