Macintosh IIci: Using Non-Parity SIMMs

Article Created: 12 August 1991
Article Last Reviewed: 10 July 1992
Article Last Updated:

TOPIC -----

If I put any non-parity SIMMs in a Macintosh IIci with parity checking, will parity checking still work?

DISCUSSION -----

No. In order for parity checking to work, all SIMMs have to be parity checking also.

On the other hand, using parity SIMMs in a non-parity IIci shouldn't be a problem as long as all the SIMMs in a bank are the same speed.
