Macintosh IIfx: UN8 PROG CELL Socket Explanation

Article Created: 23 May 1990
Article Last Reviewed: 13 July 1992
Article Last Updated:

TOPIC -----

What is the function of the slot labeled "UN8 PROG CELL" on the Macintosh IIfx main logic board?

DISCUSSION -----

The UN8 PROG CELL socket on the Macintosh IIfx logic board is for the parity memory controller.

This is only present on those Macintosh IIfx computers that are originally ordered with the parity option. There is no way to upgrade a non-parity Macintosh IIfx to have the parity option.
