    o For technical accuracy.

### TOPIC -----

I bought an Apple HD 80SC drive with A/UX 1.1 installed. When I connected the drive to a Macintosh IIfx (with the special IIfx terminator), I couldn't launch A/UX. However, other folders on the drive open fine. With A/UX, I get error messages:

```
SCSI RESET  
DISC C1D0S0:SCSI TIMEOUT  
GENERIC DISC C1D0S0 FATAL ERROR:LOGICAL BLOCK 0,  
    PHYSICAL BLOCK 1869875042  
CHROOT FAILED  
SASH#
```

### DISCUSSION -----

To run A/UX on the Macintosh IIfx, you must have A/UX 2.0 or any later version. Version 1.1 gave you this particular error message, because it doesn't know how to use the IIfx DMA SCSI scheme. If you want to use A/UX on a IIfx, you must upgrade.
