Macintosh Classic and IIsi: Checking for Memory Upgrade

Article Created: 25 June 1991
Article Last Reviewed: 17 June 1992
Article Last Updated:

TOPIC -----

How do I check a memory upgrade for a Macintosh Classic and Macintosh IIsi?

DISCUSSION -----

There are no memory diagnostics available for those systems.

The only way to verify the amount of memory in these systems to click the Apple menu and select About The Finder, when you are at the finder level. If the upgrade is installed correctly and is good, the numbers will appear in Total Memory.
