Macintosh IIsi: Using with VGA Monitors (8/93)

Article Created: 13 August 1991

Article Reviewed/Updated: 6 August 1993

TOPIC -----

I want to connect a Macintosh IIsi to a Sony CPD-1304 monitor. I've seen several references to the Macintosh LC and Macintosh LC II being used with VGA monitors, but nothing about the Macintosh IIsi.

DISCUSSION -----

Most newer Macintosh models with built-in video support VGA monitors. The Macintosh IIsi, however, requires an adapter before it will support VGA.

Lapis Technologies, Inc. produces a DisplayServer card for the Macintosh IIsi that supports VGA output.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
