Macintosh IIsi: How To Invoke Interrupt with MacsBug

Article Created: 13 August 1991
Article Last Reviewed: 17 July 1992
Article Last Updated:

TOPIC -----

I'm having problems using the programmer switch on a Macintosh IIsi. I'm using MacsBug and have tried Command-Power On and Control-Command-Power On to no avail.

DISCUSSION -----

To invoke the interrupt on a Macintosh IIsi through MacsBug, use the "hot keys" Command-Reset. And it's important that you use the latest version of MacsBug.
