Article Last Updated:

TOPIC -----------------------------------------------------------

I am having a problem installing TokenTalk and EtherTalk NB cards on our
Macintosh IIsi computers.  We have not been able to get any of the systems
up on the network.

DISCUSSION ------------------------------------------------------

Without more detailed information about the problems you are experiencing,
we can offer only some troubleshooting measures:

- Ensure that the network is properly terminated.

- If you are running System 6.0.7, ensure that the Network Product
  Installer is used to installed the Network CDEV and TokenTalk/EtherTalk
  drivers.

- If you have the Macintosh IIsi NuBus Adapter Card installed and the
  EtherTalk NB Card is properly installed, ensure that the jumper on the
  EtherTalk NB Card is set for BNC.
