## Macintosh 630 Family of Computers: Modems and Ethernet (8/94)

Article Created: 9 August 1994
Article Reviewed/Updated: 25 April 1995

TOPIC -----------------------------------------------------------

My Performa 636 documentation states I have one Communications Slot for optional modem or Ethernet card.  Can I add both a High Speed Modem and Ethernet Card to the Performa 636 or Macintosh 630?

DISCUSSION ------------------------------------------------------

Yes.  You have several options for modems and Ethernet cards for the Macintosh 630 family of computers (Quadra 630, LC 630, or Performa 636).

You can add the Apple CS Ethernet 10BASE-T or AAUI option to the Communication Slot of the Macintosh 630 family of computers and then add an external high speed modem.

If you would like both options to be internal, you can add the Apple Express Fax/Modem option to the Communications Slot and the LC Ethernet Card to the I/O Expansion (LC PDS) Slot.

The Macintosh 630 family of computers only has one Communication Slot, therefore you cannot add both the internal Apple Express Fax/Modem option and Communication Slot Ethernet card.

Compatible Apple cards for the Comm Slot are:

• Macintosh Express Fax/Modem – M2480LL/A (Discontinued)
• Apple Ethernet CS Twisted Pair Card – M3065Z/A
  (for use with a 10BASE-T compatible hub)
• Apple Ethernet CS Thin Coax Card – M2708Z/A
• Apple Ethernet CS AAUI Card – M3066Z/A

The following computers are in the Macintosh 630 family: Performa 630, Performa 635, Performa 636, Performa 637, Performa 638, LC 630, and Quadra 630.
