Apple 16 Color Monitor & Centris 610: White Lines Fix (1/94)

Article Created: 20 January 1994

TOPIC -----

I recently came across a customer who had a problem with his Centris 610/16" Apple Color Monitor which caused "white lines" to appear across the screen during scrolling (such as a word processor). The problem is repeatable, occurs only in 8-bit mode, and appears just after you start to scroll the document. It's so bad that you are unable to do any scrolling without corrupting the video display.

What is the fix for this problem?

DISCUSSION -----

The problem to which you allude was corrected in System Update 2.0.1. Once it is installed, the 16" Apple RGB Display/Centris 610 will not exhibit the "white lines" when scrolling.
