Macintosh Classic: Power & Size Requirements for Internal Drives

Article Created: 14 June 1991
Article Last Reviewed: 17 June 1992
Article Last Updated:

TOPIC -----

What are the limitations regarding the Macintosh Classic and third-party internal hard drives, specifically power consumption and physical size?

DISCUSSION -----

An internal hard drive for the Macintosh Classic drive must not be more than "1/3 height" (meaning one inch) in height. There simply isn't any room for larger hard drive.

The exact power figure for the Macintosh Classic's drive connector is 10 watts, but power consumption isn't an issue for most 1/3 height drives.
