Macintosh Classic: US/Japan Systems Are 110V Only 10/91

Article Created: 30 October 1991

Article Reviewed/Updated: 29 November 1994

TOPIC -----

I have a Macintosh Classic, and on the Power/Sweep-Board (805-0948-A) is a jumper that says 110/220 Volts. Is it simple to change to 220 Volts, 50 Hz for International use?

DISCUSSION -----

The power supply for the US/Japan Macintosh Classic is 110V only. It cannot be switched to 220V. The power supply for the International Macintosh Classic is 220V only. There are different components installed on each power supply.

Modifying the power supply by changing the JP1 jumper to work within a different voltage is definitely not recommended and will void the warranty.
