Macintosh Classic: Boot ROM Option Is Not a Supported Feature

Article Created: 25 January 1991
Article Last Reviewed: 16 June 1992

TOPIC -----

I'm testing some features of the Macintosh Classic; in particular, the Boot ROM option (Command-Option-X-0). It's really fantastic, but we (outside the U.S.) have a problem with the International Resources such as keyboard resources. When booting from ROM, you are automatically in QWERTY mode. It's "normal," but what can be done for people who are using AZERTY or something other than a QWERTY keyboard?

DISCUSSION -----

The Boot ROM option isn't a supported feature in either domestic or international versions of the Macintosh Classic. The code was part of an experiment in future directions and wasn't taken out before the ROMs were finalized.

Because the software in use was not fully tested with the Macintosh Classic, we don't recommend its use in any way.
