Macintosh Classic, Classic II: Screen Brightness Adjustment

Article Created: 4 June 1991

Article Last Reviewed: 18 May 1992

Article Last Updated: 18 May 1992

TOPIC -----

I saw that the Macintosh Classic and Classic II's screen brightness is adjusted via System software. If I use System 6.0.3 in my Classic or Classic II, how can I control the screen brightness?

DISCUSSION -----

The Macintosh Classic is incompatible with any System Software version earlier than 6.0.7. Even if there were a way to use the Brightness CDEV with System 6.0.3, the Classic would not start up. The Macintosh Classic II needs to use System 7.01 in order to function correctly.
