TOPIC -----

What are the generic pinouts for connecting a Macintosh to a high-speed 9600 baud V.32/V.42 modem?

DISCUSSION -----

Here are the generic pinouts:

Modem	Macintosh
1-7	4-8
2	3
3	5
5	2
4	1

These pinouts apply to all "V" series modems and all Macintosh computers. Older Macintosh computers have slightly different serial ports than the later machines and may not support the fastest possible Macintosh-to-modem speeds.
