## EPROM Burners for Macintosh

This article last reviewed: 12 April 1990

TOPIC -----

Is there an EPROM programmer device or software that can be connected to the Macintosh ?

DISCUSSION -----

You have quite a few options. If you search the Redgate Buyer's Guide or MENU/Software Library on the keywords EPROM and Macintosh, you'll get a list of many software applications. Many of these programs generate object files in Motorola S, Intel Hex, and TEK-Hex (Tektronics format) record formats, used by a majority of PROM burners. Some programs have their own built-in communication emulation package, while others require you to use a terminal emulation program, such as MicroPhone or MacTerminal, to download to an emulator or EPROM programmer connected to the Macintosh modem or printer port.

We have also seen various PROM burners advertised in the Macintosh magazines. A check of back issues should help you develop a list of names.
