Macintosh IIvx: IIci Cache Card, Accelerator Slot Incompatible

Article Created: October 19, 1992

TOPIC ---

Can I use the IIci Cache Card in the new Accelerator slot?

DISCUSSION --

No. The Macintosh IIci Cache Card is incompatible with the new accelerator
slot. The accelerator slot does not accommodate cache-only cards.

Macintosh IIvx has its cache architecture on the logic board, which means
the accelerator slot is left open for a third-party accelerator card.

Accelerator cards such as 50 MHz 68030s or cards based on 68040s are meant
for this slot.
