Macintosh IIvx: Startup Problems (7/93)

Article Created: 22 July 1993

TOPIC -----

I just set up my Mac II vx for the first time and tried to turn it on, but nothing happened. Why?

DISCUSSION -----

Try reseating the power supply. Most of the time, making sure the unit is plugged in securely to the rear of the unit and to the power source will solve the problem. Also check that the power strip switch is turned on.

If the problem continues, contact your local dealer or call 1-800-SOS-APPL for further assistance..
