## Macintosh LC: Apple IIe Card Enables Network Printing

Article Created: 14 May 1991

Article Last Reviewed: 3 June 1992

Article Last Updated:

### TOPIC -----

If I connect several Macintosh LC computers via LocalTalk connector kits and have a couple of ImageWriter printers attached, will the software recognize the printer location when using the Apple IIe emulation card?

Specifically, most standalone software for the Apple IIe looks for slot 1 to print. If I use the LocalTalk option card in the ImageWriter and connect up via LocalTalk, will it recognize the placement of the printers? Will I be able to print using the Apple IIe Card and Apple IIe software under this scenario?

### DISCUSSION -----

When using the Apple IIe card in the Macintosh LC, you can print to serial devices using PR#1, and print to LaserWriters and ImageWriters on a LocalTalk network.
