Macintosh LC w/Apple IIe Card: SCSI Ethernet Box & AppleTalk

Article Created: 3 February 1992

Article Last Updated:

TOPIC ---

I have a Macintosh LC with the Apple IIe Card connected to Ethernet via a
SCSI Ethernet box. Can I use ProDOS software to access AppleTalk services?

DISCUSSION ---

Our driver is designed to use the Apple Ethernet LC Card and not to look
for the Ethernet connection from the SCSI port. If the vendor of the SCSI
Ethernet box included a driver for the Apple IIe Card side, that setup
should work.

We suggest that you contact the vendor of the SCSI Ethernet box for
confirmation.
