Macintosh Plus: Why There's No External Monitor Option

Article Created: 30 April 1991

Article Last Reviewed: 27 July 1992

Article Last Updated:

TOPIC -----

Why didn't Apple offer an external full-screen monitor option for the Macintosh Plus?

DISCUSSION -----

The main reason is that the Macintosh Plus was not designed to support any expansion cards. Short of modifying the case, there was no supportable way to connect a driver board and cabling to the logic board of the Mac Plus. Additional load on the power supply would also be a concern.
