Macintosh Plus ROMs and SIMM Compatibility

Article Created: 22 March 1991

TOPIC -----

Is it true that Macintosh Plus ROMs won't work with some third-party SIMMs? I bought some 1MB NEC SIMMs and get consistent "sad Macs" when I try to start the Macintosh Plus with them installed.

DISCUSSION -----

We don't know of any reason to upgrade ROMs for SIMM compatibility, nor of any incompatibility with the mentioned SIMMs and the Macintosh Plus. If the Macintosh bombs only with those SIMMs installed, try them in another Macintosh model to see if it is related to the Plus or if one of the SIMMs is bad.
