Macintosh Portable: Battery Rating

Article Created: 9 January 1990
Article Last Reviewed: 30 July 1992
Article Last Updated:

TOPIC -----

An Australian customs tariff for Macintosh Portable batteries states that the following requirement must be met:

"Accumulators, lead acid, including gel and lead calcium types, permanently sealed, rechargeable, capacity NOT exceeding 11 amp-hours at the 20-hour rate."

What is meant by the 20-hour rate, and do our Portable batteries fall within this rate?

DISCUSSION -----

The 20-hour rate is an indicator of battery capacity, a measure of how much current is required to drain the battery over a 20-hour period. Macintosh Portable batteries carry a rating of 5.4 amp-hours at 20 hours, so they fall within this guideline.
