TOPIC -----

Can the Macintosh Portable be charged from a 12-volt battery?

DISCUSSION -----

Yes. One product that makes this possible is the Automobile Power Adapter from Lind Electronic Design. As we understand it, with the Adaptor, you can operate a Macintosh Portable while charging its battery from the 12-volt DC battery in an automobile, van, or boat. The adapter unit contains a voltage regulator and current-limit circuits that ensure safe computer operation and battery charging from a mobile power source. Lind includes cords for an automobile cigarette lighter and for the computer's power adapter jack with the adapter.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
