Macintosh Portable: Modem Ring Detect Problem and Workaround

TOPIC -----

I have a Macintosh Portable. I experienced problems using the internal modem when the Portable's Ring Detect feature is on.

DISCUSSION -----

The Ring Detect setting is located in the Portable's Control Panel Device (CDEV) and lets users wake up their Portable when an internal modem detects a phone ring. This setting can be accessed only when an internal modem is installed.

This problem was fixed in System 6.0.7. System 7 also fixes the problem.
