## Macintosh Portable: High-Pitched Sound at Startup

Article Created: 22 April 1991

Article Last Reviewed: 29 July 1992

Article Last Updated:

TOPIC -----

When I try to start up my Macintosh Portable, I get a high-pitched sound through the speaker. The first time, I replaced the logic board. After a while, the sound came back.

DISCUSSION -----

If the Portable has any peripherals (excluding anything plugged into the serial ports), check them. A failing device may be causing portions of the logic board to fail.

If the Portable has no extra peripherals, check the keyboard for either cracks or flexing. These may put it in contact with the case.
