TOPIC -----

Can the Macintosh Portable's display screen be detached? A customer wants to detach the display and mount it on a swing arm of a wheelchair, with the rest of the Portable under the wheelchair.

Is this possible?

DISCUSSION -----

It is possible to remove the screen from the Macintosh Portable, but you'll need a special monitor extension cable that Apple does not manufacture.

Also, Aura Systems makes a product called ScuzzyGraph that allows connection of monochrome and color monitors to the Macintosh Portable and other members of the Macintosh family.

To locate a vendor's address and phone numbers, use the vendor name as a search string.
