Duo Dock: How Far It Ejects the PowerBook Duo

Article Created: 10 March 1993

TOPIC -----

When the Macintosh Duo Dock ejects a PowerBook Duo, how far should the PowerBook Duo be ejected?

DISCUSSION -----

As a general rule, the PowerBook Duo is ejected from the dock approximately 2.5 inches (6.3 cm). This is a typical measurement, not a minimum or maximum.

It's similar to a VCR ejecting a video tape: if you can easily grab the Duo and pull it out of the machine, then the Duo Dock is operating correctly.
